SECTION 100 - GENERAL INFORMATION

110.00 Roadway Design Section. The headquarters Roadway Design section ([organization chart](#)) is managed by the Roadway Design Engineer and has general overall responsibility for statewide project design and development.

120.00 Roadway Design Mission and Function. Roadway Design is committed to maintain quality and provide assistance to the Highway Development program while leading the Idaho Transportation Department in the growth, development, and evolution of the art and science of highway engineering.

The function of the Roadway Design section is to:

- coordinate the statewide design activities,
- facilitate District and headquarters project development activities,
- aid in resolving design conflicts,
- process design exceptions, and
- ensure that state, local and American Association of State Highway and Transportation Officials (AASHTO) Standards are met or have been approved for exception.

130.00 Roadway Design Organization. The Roadway Design section responsibilities are organized as follows:

Area Engineers

Each area engineer acts as a liaison between the Districts and Headquarters relative to matters concerning concept analysis, feasibility studies, project development, geometrics, project plans, specifications, estimates, reviews, preparation of advertisement and award of contracts. One Area Engineer is also the PS&E Engineer and oversees the PS&E Unit.

Consultant Administration /Local Roads/Standard Drawings/ Special Projects Unit

The Consultant Administration /Local Roads/ Standard Drawings/Special Projects Unit (CAU) coordinates all agreements with consultants for development of projects on the State Highway and Local Roads Systems. The CAU is also a resource to other sections of the department for Professional Agreements as outlined in the [Professional Service Agreement Procedures](#). Should consultant services be desired, a Request for Consultant Services, [ITD-2760](#), should be completed and sent to the CAU. The CAU leader is also the Local Roads Engineer and oversees standard drawings and special projects.

Specialties

A specialties engineer in hydraulics is available to provide valuable assistance in this specialty.

A utilities engineer and utilities staff are available to provide assistance in this specialty area.

A project management supervisor oversees support specialties including scheduling, location, aerial photography and programming and develops standards and training.

A geometrics engineer is available for statewide assistance and is responsible for statewide reviews and statewide geometric issues.

Engineering Support

Engineering support provides engineering expertise, solutions, and support through the use of computerized methods. The unit includes CADD, microcomputer and engineering programming support.

Contract Administration and Award

All contracts are advertised and awarded, per rules and regulations, from the Roadway Design section through the PS&E Unit.

140.00 Environmental Section. The Environmental section works very closely with the Roadway Design section and is managed by the Environmental Manager. The section prepares, reviews, and approves environmental documents and recommends actions concerning environmental clearances for the Federal Highway Administration. The Environmental section provides expertise in design of projects that require special protection measures for environmental elements and for compliance with permits.

Illustration

Under the direction of the Environmental Manager, illustration services are provided to headquarters and the Districts.

150.00 FHWA Oversight. An Oversight Agreement has been entered into by the Federal Highway Administration (FHWA) and the Idaho Transportation Department (ITD). A stewardship plan has been developed as part of this agreement through a joint effort by FHWA and ITD.

The Oversight Agreement indicating the ITD/FHWA oversight responsibility and FHWA approval on each phase of project development and construction is shown in [Figure 1-1](#).

The following documents are not to be sent to FHWA unless specifically requested:

ITD Administered Projects-

Materials Phase Reports

Notice to Contractors

Pre-construction Conference Notice

Construction Inspection Reports

Record of Change order Authorization (ITD-2317)

Change Order to Contractor (ITD-400)

Quantity Variance Request (QVR) (ITD-2243)

Estimate Voucher/Final Inspection and Review of Final Estimate & Records

Statement of Elapsed Time and Status of Work

NPDES Storm Water Permit Project Checklist for Construction (ITD-2784)

All Projects (ITD Administered and FHWA Full Oversight)-

ROW Plans

155.00 Value Engineering. Section 106(g) of Title 23, United States Code provides: “The Secretary shall establish a program to require States to carry out a value engineering analysis for all projects on the National Highway System [NHS] with an estimated total cost of \$25 million or more.”

The FHWA will assure that a VE study is preformed on all Federal-aid funded NHS projects with an estimated cost (includes design, right-of-way, and construction costs) of \$25 million or more, and on other Federal-aid projects where its employment has high potential for cost savings. In addition, FHWA will strongly encourage State Departments of Transportation to use VE throughout highway project development, design, and construction.

Value Engineering is defined as the systematic application of recognized techniques by a multi-disciplined team to identify the function of a product or service, establish a worth for that function, generate alternatives through the use of creative thinking, and provide the needed functions to accomplish the original purpose of the project, reliably, and the lowest life-cycle cost without sacrificing safety, necessary quality, and environmental attributes of the project.

Project is defined as a portion of a highway that a State proposes to construct, reconstruct, or improve as described in the preliminary design report or applicable environmental document. A project may consist of several contracts or phases over several years.

The FHWA Value Engineering Policy, Regulations and Process can be found at

<http://www.fhwa.dot.gov/ve/index.htm>

Additional guidance on Value Engineering may be found in [Part 627 of Title 23 Code of Federal Regulations \[CFR\]](#).

160.00 Design Manual Use. The Design manual has been written for use by District Design sections. Any reference to "the District" may be replaced with "consultant," etc., depending on what entity is responsible for the development of the project being designed.

170.00 Electronic Forms. Most of the referenced forms are available in electronic .doc or .xls format. To complete these forms electronically, click on the word document or excel worksheet version button. This will allow the documents to be saved for future use. Most forms in this manual are also available in electronic version in the Public Folders in Microsoft Outlook (the current e-mail system). Open Outlook, click on Public Folders, click on All Public Folders, click on Roadway Design, click on Roadway Design Forms. The forms are listed by ITD number or other identifying notation. For further assistance, to change a form, or make suggestions, contact the Roadway Design section.

180.00 Design Manual Changes. Use the [ITD-0063](#), Request to Change Manual, for any recommended changes. Complete the form and send it to the Roadway Design Engineer. Approved changes will be incorporated in the next manual update.

190.00 Glossary.

AASHTO	American Association of State Highway and Transportation Officials
ACHP	Advisory Council on Historic Preservation
ADT	Average Daily Traffic
AERO	Bureau of Aeronautics
AHERA	Air Hazard Emergency Response Act
BA	Biological Analysis
BLM	Department of Interior, Bureau of Land Management
BMP	Best Management Practices
CADD	Computer Aided Drafting and Design
CAPA	Critical Aquifer Protection Area
CE	Categorical Exclusion
CFR	Code of Federal Regulations
CO	Carbon Monoxide
COE	Corps of Engineers
CRSI	Concrete Reinforcement Steel Institute
DBA	Decibels
